Baby Olga

When we first met Baby Olga, she was HIV positive, suffering with bacterial meningitis and had been abandoned by her mother. Upon admitting Olga to Russia Hospital we learned she also had pneumonia. Due to Olga’s tender age and fragile health we have been supporting her for longer than most. We are grateful for her Grandmother’s continued care. Olga is currently undergoing physio-therapy and taking a combination of medications...slowly improving.

Please pray for this precious child & the many others like her.

We need your help...

The ever-increasing need in Kenya is growing faster than our bank account. Please help us *NOT to have to say NO* to new patients.

Give as generously as you can. We thank you, sincerely.
